

Nathan Lilienthal

nathan@nixpulvis.com ◦ <https://nixpulvis.com> ◦ +1-202-701-4368

Research Interests: Programming languages, multi-language embedding, multiparty computation, type systems (including refinement and graded types), contracts and blame, security and safety, compilers, complexity theory, communication networks, and lambda calculi.

Education

- **Northeastern University** **Boston, MA**
College of Computer and Information Science *2011 – 2016*
Bachelor of Science in Computer Science
 - **Relevant Courses:** Programming Languages, Special Topics in Programming Languages, Compilers, Systems and Networks, Computer Organization, Software Development (aka HELL), Theory of Computation, Algorithms and Data Structures, Fundamentals of Computer Science 1 & 2, Object Oriented Design, Artificial Intelligence, Logic and Computation, Combinatorics.
 - **Clubs & Extracurriculars:** Association for Computing Machinery, NU Hacks, Hack Beanpot.
 - **Projects** <https://github.com/nixpulvis>
 - **alacrity**, a cross-platform, GPU-accelerated terminal emulator (contributor)
 - **oursh**, a multi-language shell which aims to be POSIX compatible, written in Rust
 - **lalrpop-lambda**, parser and reductions for the lambda calculus with a minimal webapp
 - **parser-combinator**, a Racket implementation of a recursive descent parser, used by students for a JSON lab
 - **brainfuck**, a complete and reasonably performant BF interpreter
 - **nrf24l01**, basic working AVR firmware for the Nordic Semiconductor's nRF24L01+ radio transceiver
 - **maze_gl**, a small maze generation and first person OpenGL game
-

Research Experience

- **Northeastern University** **Boston, MA**
Research Programmer, Intelligence Advanced Research Projects Activity, HECTOR *Aug. 2019 – Aug. 2020*
 - Collaboratively developed a hybrid-mode secure programming language design for multi-party computation (MPC)
 - Represented my team, at both remote and in-person technical exchange meetings with other researchers
 - Built a prototype implementation of our language, which is forked from the Rust programming language
 - Began a formalism for our language(s), which will include sound typing rules and reductions
-

Teaching Experience

- **Northeastern University** **Boston, MA**
Teaching Assistant, Fundamentals of Computer Science 1 *Fall of 2012, 2013, 2014, and 2015*
 - Conducted mini-lectures, monitored class progress, and answered students' questions
 - Discovered new ways to present concepts that facilitated student understanding
 - Assisted students during established office hours
-

Professional Experience

- **Forward Financing Inc.** **Boston, MA**
Sr. Software Engineer *May 2018 – Aug. 2019*
 - Performed various application performance improvements, often caused by unacceptable response times
 - Planned architecture refactoring, including object model improvements, and a new data permissions system
 - Led efforts to create an orchestration CLI for managing a complex Heroku + Salesforce microservice system
 - Developed a client wrapper for an Algolia search implementation
 - Mentored the co-op university students by providing deep code reviews and pairing on problems
- **HOMER Energy** **Boulder, CO**
Software Developer, Summer Intern *Jul. 2017 - Nov. 2017, Summer 2012*
 - Built API integrations for the HOMER C# application, including REST and CSV file APIs, which involved a general refactoring of the code which imports data, complete with added tests

- Developed an internal tool to view the Google Protocol Buffer used to pass values between all parts of the application, allowing developers to quickly see inputs and outputs
- Created a web based front-end for HOMER in Rails, which served as the starting point for another version and provided a proof of concept for how to integrate the HOMER API with a webserver

- **Apple Inc.**

Cupertino, CA

Software Engineer

Jan. 2015 – Aug. 2015, Jul. 2016 – Jul. 2017

- Built a Ruby library (**radic**) and CLI (**radish**) for interacting with Apple's bug management system (aka Radar)
- Participated in a cross-cutting web design work group to help create common components for the hardware teams
- Contributed to an internal tool for managing hardware validation, which was inspired in part by Travis CI
- Contributed to an internal tool for analysing large amounts of pre-production device test data

- **Americas Test Kitchen**

Boston, MA

Web Developer

Jan. 2014 – June 2014

- Pushed code to the front-end and back-end for all four Americas Test Kitchen websites, including bug fixes and technical infrastructure upgrades
- Built modularized components to abstract functionalities found in common throughout the company's codebase

- **Bluesocket - Adtran**

Burlington, MA

Software Developer

Jan. 2013 – June 2013

- Developed an automated build system, which reduced turnaround time, allowing anyone to easily run a build
- Addressed user reported issues in Ruby/Rails and LUA, including hardening validations and updating database migrations for old versions of the software
- Designed a class/model structure for users and wireless accesspoints, which allowed the back-end to represent clients of individual accesspoints

Programming Languages: Rust, Racket, Ruby, Shell, C/C++, LUA, ECMAScript (JS), Python, Java, and more...

Systems: UNIX / Linux, Git + Hub / Lab, Rails, Heroku, Postgres / SQLite, AVR / ARM, WoW (ask me about it).

Other Interests: Teaching, Microelectronics, Woodworking, Music, Gaming, Skiing, Cats, ...
